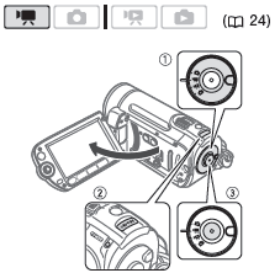
How to Record a Video with Canon FS11

Step 1: Set the mode dial to and turn on the camcorder.



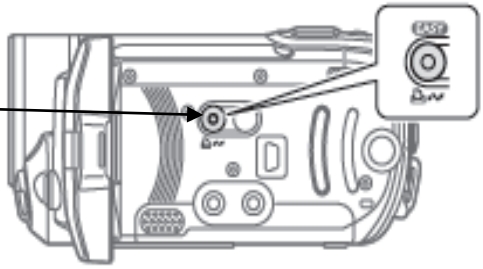
Step 2: Press Record or (Start/Stop) button located in LCD Panel to start recording the video.

Step 3: You can zoom in or out by using the zoom lever towards **T** to magnify or towards **W** to reduce the magnification.

Step 4: When you finished recording your video, press the Record or Start/Stop button to pause your Video and create a clip file for your video.

Note: Canon FS11 creates a movie clip file for every time you pause your video recording.

Some Important settings of the Camera FS 11



- Easy mode will help you to adjust automatic settings for your camera. When you are in Easy mode, you cannot access FUNC Key at the LCD panel which means you cannot change any settings during the video recording.
- Canon FS11 offers 3 different recording modes which are XP, SP and LP. These 3 modes also defines the quality and size of the video file.

XP	SP	LP
3hr. 40 min 9 mbps	5 hr. 30 min 6mbps	10 hrs. 25 min 3mbps

Note: You can change the recording modes by accessing the FUNC key at the LCD Panel.

How to view Video clip with Canon FS11

Step1: First set dial to play movie mode

Step 2: All the movie clip will appear in thumbnail size so use joystick to select the movie clip that you want to play.

Step 3: When you selected the movie clip, Press (Start/Stop) button located in LCD panel to play the selected video clip.

How to delete a Video Clip in Canon FS11

Step 1: First set dial to play video mode

Step 2: Select the video clip that you want to delete by using joystick and press FUNC key located at the LCD panel.

Step 3: When you press FUNC key, you will see five different options at the bottom of the LCD screen.

Step 4: Among the five different options, you have to select [DELETE] using joystick and press Set button located at the center of the joystick.

Step 5: It will prompt you to delete either one scene or all the scenes, so select one scene option to delete only the video clip that you have selected to delete. After that select Yes option using joystick and the video clip will be erased from the camera.

Downloading Video clips to a computer

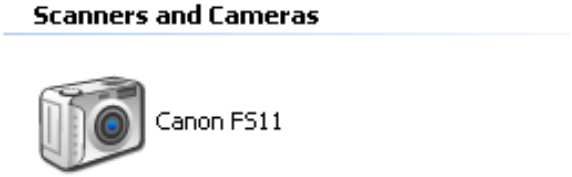
Step1: Connect the camera to the computer using the USB cable. Important Note: You should also connect the power supply DC/ IN to the camera.

Step 2: Set the camera to Video play mode and turn on the power.

Step 3: Windows XP operating system will automatically detect the camera and install the necessary drivers for it.

Note: In some case, the camera will prompt you to select either DVD burner or PC Connect option before it connects to the computer. If it appears in your camera than you have to select PC connect.

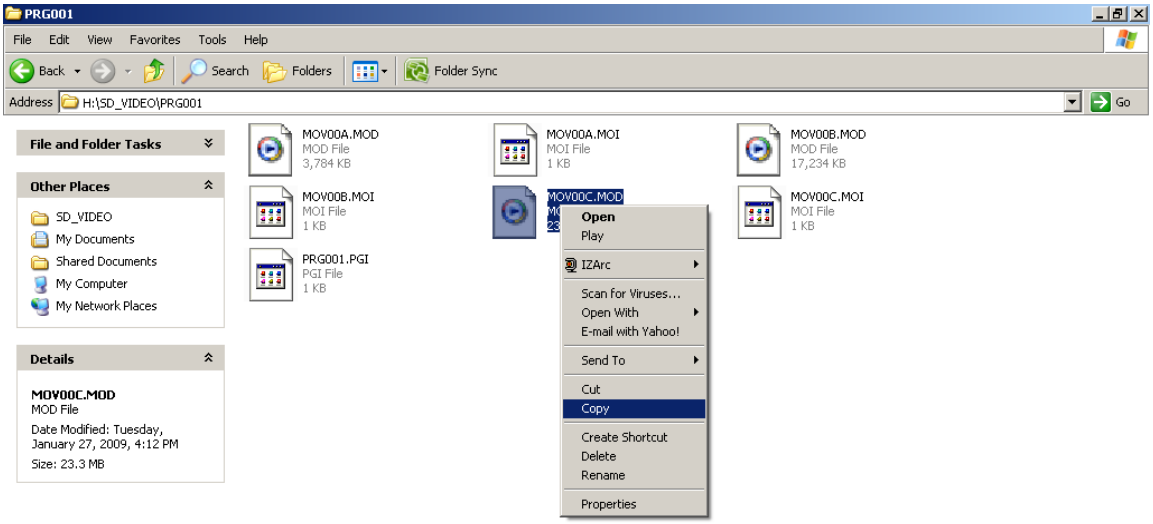
Step 4: Double click on My Computer icon on the desktop. You will now be able to see the camera as a part of Cameras and Scanners attached to the computer.



Step5: Double click on Canon FS11 icon >> Select SD_Video folder >> select PRG_001 folder . Once you open PRG_001 folder, you will see list of video clip that you recorded.

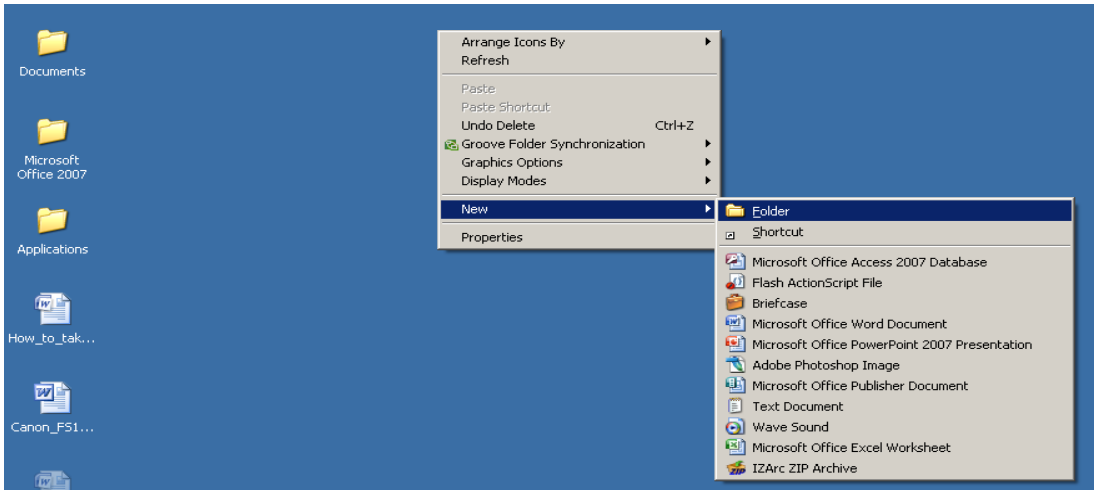
Step6: Double click on the video clip to play and check it before you copy that to your local computer.

Step7: Once you know which video clip to copy, right click on that video clip and copy it. If you want to copy more than one video clip than select multiple video clips holding Ctrl key and copy all of them. (Ctrl+C is the shortcut key to copy the selected items.)



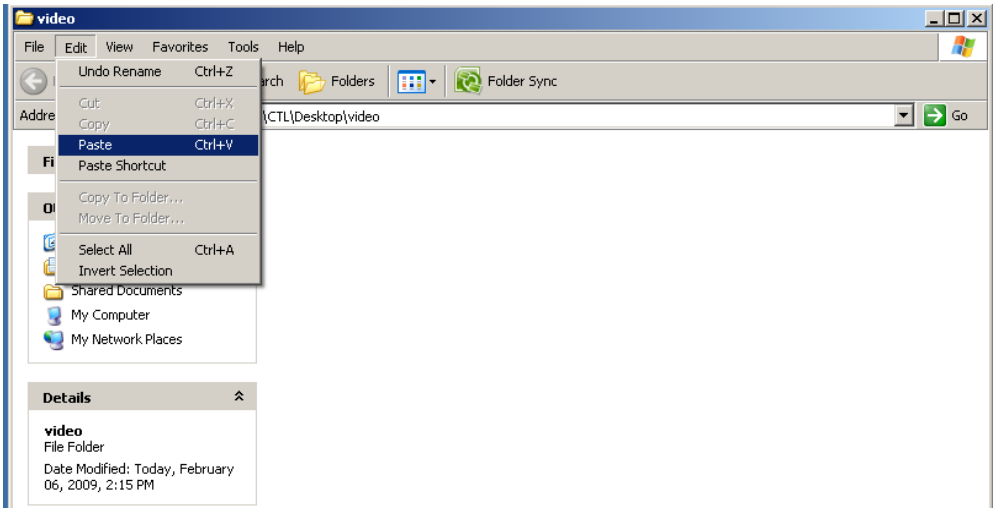
How to Save the Video clips to the Computer

Step 1: Create an empty folder in the desktop and name it Video.



Step 2: Once you create the Video folder on desktop, double click on it to open that folder.

Step 3: Select the Edit menu located at the top of the window and choose paste option from the menu.



The computer will than copy the video clips that you have copied to the destination folder.
